

FlashBack-2 USB

- *Records to an internal CF memory card, which cannot be easily removed*
- *Easy playback via USB interface to a PC*
- *Lightweight and highly rugged with no moving parts*
- *Stereo line and mic level audio recording*
- *DC powered with low current consumption (6 to 15V DC)*
- *Extended temperature range operation (-20 to +60°C possible with suitable card)*

FlashBack-2 USB Embedded CF Card DVR

FlashBack-2 USB records to an internal compact flash card, which cannot be easily removed. It is designed to satisfy evidential procedures where the first down load is considered the master copy.

As the card is embedded within the unit, FlashBack-2 USB is mechanically very robust and with no moving parts, is able to withstand extreme shock and vibration. Furthermore, extended temperature range operation of -20 to +60°C is possible when using a suitably specified CF card.

FlashBack-2 USB offers the same benefits as FlashBack-2 but with direct access to the CF card via the USB Port.

FlashBack-2 USB Playback

As FlashBack-2 uses industry standard MPEG-2 compression the video may be played back by simply connecting a USB cable and double-clicking the file shown in the Removable Drive Window. Alternatively it may be transferred to a PC's hard drive in the usual way.

Removing the Internal Disk

If required, it is possible to remove and replace the internal Compact Flash Card (Disk) by removing the two front panel screws. The card is then released by pressing the eject button.

For more information, please refer to the standard FlashBack-2 brochure.
