

burning evidence made easier!

MultiBurner has been specifically designed for use with AfterBurner, the time-lapse DVD video recorder for police surveillance, and is capable of burning up to seven AfterBurner disks unattended. MultiBurner is ideal for long-term surveillance operations and speeds up the download of evidence gathered.

Saves Time

Burning disks containing evidence gathered is time consuming. MultiBurner complements AfterBurner and saves operator time by allowing up to seven DVDs to be burnt without the need to constantly remove and reload disks.

Another time-saving feature is the ability to burn multiple copies. This is particularly useful for producing a master and working copy when preparing evidence for court.

-  **DVD Burning Station for use with AfterBurner**
-  **Saves time, burns up to seven DVDs without operator intervention**
-  **Can be deployed with AfterBurner**
-  **12 Volt DC Powered, suitable for battery operation**
-  **Ideal for long-term surveillance**

Automatic Burning

MultiBurner is easy to connect to the AfterBurner via a ribbon cable which is supplied with the unit. When the disks are loaded and the units connected, MultiBurner will automatically burn evidence gathered from AfterBurner's hard drive.

Flexible Burning Station

A single MultiBurner can be used back at base to speed-up the download of evidence gathered from a number of AfterBurners returned from the field. Alternatively, MultiBurner can be deployed alongside an AfterBurner where up to eight DVDs will be automatically burnt without the need for user intervention. When the user returns they will have a set of burnt disks ready for analysis.

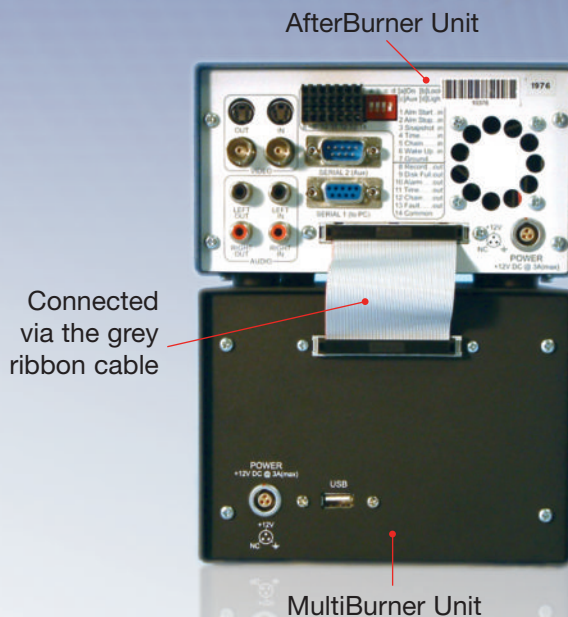

Compatible with AfterBurner
