Automated flash memory card archiving system

- Simple, easy to use dedicated unit for archiving picture, video and audio evidence gathered on flash memory cards to CD, DVD disk or Blu-ray.
- Bit-for-bit master transfer of card contents with data verification.
- Additional working copies are easily generated.
- Automatically authors Ovation FlashBack-2 files to DVD video disk.
- Optional full erase (overwrite) of card data after archiving.
- Meets the requirements of the UK Home Office's Digital Imaging Procedures.
- Complements Ovation's range of covert digital video and audio recorders.

Ovation PUMA offers fast and secure archiving of video, audio and picture evidence gathered on removable flash memory cards and USB data sticks. Ovation PUMA is evidentially secure and was developed in conjunction with the UK Police and meets the Digital Imaging Procedures laid down by the UK Home Office.

The key to PUMA is its simplicity. Once a flash memory card is inserted into PUMA's multiple card reader, just one button press is all that is required to generate a bit-for-bit master copy of the evidence to a CD, DVD or Blu-ray. Additional working copies are then easily generated, with the option of authoring Ovation's FlashBack-2 files to DVD video disk. Once archiving is complete, PUMA can securely erase the card by over-writing each and every bit of data.

This type of archiving using a standard PC is not as evidentially secure and requires a number of software packages and specialist knowledge. With PUMA, handling and archiving of highly sensitive media card evidence is now quick, easy and requires minimal operator training.

PUMA has been well received by the UK police and won second place in the 2009 Equipment Technology and Innovation Awards organized by the UK's Home Office Scientific Development Branch.

PUMA, Highly Commended
